

## WHO SHOULD USE THE SYSTEM?

The system has been designed for, but is not limited to, the following users:

Property Developers, Mine Operators, Consultants, "Alliance" Projects, "Cost Plus" Projects, Contractors, Plant Hire Companies, Small Property Improvement Developers, Service Providers, Financial Institutions, Restaurants and Hotels, Manufacturing Companies, small to large retail outlets, to name but a few.

Due to flexibility built in to the DBSU2448 system, the limits of use for the system are dependent on an "open mind" and one's individual requirements. The various user interfaces include "digital scanning with no input", "simple spreadsheets assisted by a digital scanning process", "simple spreadsheets", and "direct input" with some training. Each method is chosen based on the user's computer skills. We have strived to keep the system simple, but in line with corporate requirements. You decide on how you wish to work, and you are not confined to a "one for all system with extensive training required".

Some of the benefits to the individual industries apart from the savings are:

Construction, Mining and Property Development - A good tool for "Alliance" and "Cost Plus" projects, as the Client, Consultant, and Contractor have an unbiased daily view of the project and where it is heading, without multiple input by all. The estimating capabilities are also of great assistance with multiple functions available. Short of management staff? This system can fill these gaps and is compatible with existing systems.

Plant an Equipment Hire Companies - The asset performance strengths covering projection prior to the equipment purchase, right through to the "when should you sell" stage, coupled with the daily detail which covers production performance and repairs make the system a valuable tool in the plant and equipment hire industry.

Real Estate and "Home Improvement" ventures - Allows the developer to analyze the property up front, builds in varying interest rates, property appreciation, and projects the profitability over more than 12 different options chosen. It also tracks performance once the project has started, allowing for further projections.

Hospitality and Retail - There are some exciting opportunities for the open minded person, seeking to analysis his business in the finest detail imaginable. These are certainly interesting industries to explore. From Hotel to Restaurant to Liquor Outlet to Golf Course, the scope is huge.

Manufacturing - The daily detail and tracking facilities, coupled with inventory capabilities and product performance makes this tool ideal for this industry.
